

So, you've had a rodent treatment...

You can expect to...

- Hear or see an increase in rodent activity after the treatment has been done
- The increase in activity is because they become attracted to the baits
- This will subside over the next 3-4 weeks
- Do not seal off any entrance/exit points until the infestation is under control

Here's what you can do

Is it quite hard to prevent rodents from entering your property all together as they can squeeze through tiny gaps. However, there are some precautions you can take and these include:

- Clear rubbish and stored items from areas of concern
- Remove possible food sources such as food scraps, dirty dishes, food crumbs
- Cut back trees and bushes from your home to stop easy access
